

**HM0005A 3/8" DOUBLE BLOCK**

This is a double block version of the HM0005 Block. As a double it is available only as shown with the shackle attachment.

**Caution**

Many Marine Distributors are now selling line produced outside of the U.S. This line is usually made to Metric dimensions. After importation this line is labeled as a fractional U.S. size. Such line is usually oversized, sometimes very much so, and may not work well in domestic products. All Bristol Bronze products are made to exact U.S. sizes.

**HM0005 3/8" BLOCK**

This is our smallest 3/8" Herreshoff block. As with all such blocks the cheek pieces are separately cast and riveted together. Being made in this method allows a wide variety of attachments such as becketts (shown above) sister hooks, Coleman Hooks, gaff bridle saddles, and mouseable hooks to be used.

**HM0006 BECKETT**

**HM0021 1/4" Block**

This Herreshoff Block is designed for use with up to 1/4" line. It was the original equipment block on the Herreshoff 12 1/2. It is available with various attachments such as

balls, becketts and sister hooks.

**BB0689 COLEMAN HOOKS**

This type of sister hook rotates the orientation of the block by 90 degrees.

**HM0014 & HM0054  
MOUSEABLE  
HOOK**

**HM4757.5  
SHEET BAIL**

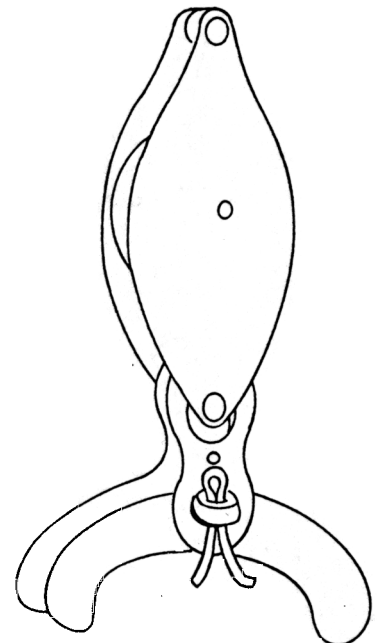

**HM0036A 3/8" DOUBLE BLOCK**

This block is a double version of the HM0036 3/8" Block. When necessary it can be supplied with toggles and a shackle at both ends.

**HM0035 Sister Hooks** These Herreshoff pattern hooks allow for quick attachment and quick release of any block. These hooks are not recommended for use under heavy loads.

**HM0036 3/8" BLOCK**

This is an elongated version of the HM0005 3/8" Herreshoff Block. The elongation at the opposite end allows room for an additional attachment (most frequently a beckett) or to splice a line around. Shown here with a gaff bridle saddle it is available with all standard attachments.
